Abstract:
The Anti-malnutrition Program (AMP) is the most successful program that has been introduced in Sub-Saharan Africa to reduce malnutrition in mothers and children suffering from starvation and irreversible damage to their psychosocial development.

Introduction
Large natural disasters such as migrant crisis in Myanmar, tsunami in Indonesia, earthquake in Haiti offers opportunity for humanitarian help. In 2018, famine looms across 13 countries in Africa and the Middle East. At least 2.5 million kids are still confronting starvation. (3)

Anti-malnutrition programs launched in 1990s when RUTF (ready to eat therapeutic food) and special milk formulas for fighting malnutrition were introduced for the first time saving millions lives. They are, in fact, the most successful programs introduced to Sub-Saharan Africa to reduce malnutrition in mothers and children suffering from starvation and irreversible damage to their psychosocial development. (1,2) An overview of AMP in SSA as a part of the Mission of European Christian Values is presented.

Overview of anti-malnutrition programs in Africa
An overview of anti-malnutrition programs in 6 Sub Saharan African countries operated by anti-malnutrition staff of Tropic team of St. Elizabeth University in Kenya, South Sudan, Uganda, Burundi, Lesotho, and Rwanda is described. Programs are operating since 1999 (Kenya); 2000 (S. Sudan); 2004 (Uganda); 2008 (Burundi); 2010 (Rwanda) providing milk powder (“Milk for Mothers and Children”) - Muhoroni and Nairobi, general food (wheat) Malindi, Nairobi, for pregnant women in Gordhim (S. Sudan), meat for children (“Goat for task-force”) (Tab 1).

Conclusion

Anti-malnutrition programs are crucial for mother and child’s health and school prosperity in Sub-Saharan Africa where about 40 million children and mothers are starving. Apart of the World Bank, Global Fund and FAO (Rome) NGOs in all EU and US should meet together.
